

Amazon Simple Notification Service (SNS) is a fully managed messaging service for both application-to-application (A2A) and application-to-person (A2P) communication.

SNS allows you to send messages to a large number of subscribers, either directly or through various communication protocols such as HTTP/S, Email, SMS, or AWS Lambda

Use Cases

- Alert and notification systems (e.g., CloudWatch alarms)
- Sending emails or SMS messages to users
- Triggering Lambda functions
- Distributing messages to multiple microservices

Step 1 :- Go to the AWS console and search for SNS

Step 2 :- Create Topic by giving the name

Application Integration

Amazon Simple Notification Service

Pub/sub messaging for microservices and serverless applications.

Amazon SNS is a highly available, durable, secure, fully managed pub/sub messaging service that enables you to decouple microservices, distributed systems, and event-driven serverless applications. Amazon SNS provides topics for high-throughput, push-based, many-to-many messaging.

Create topic

Topic name
A topic is a message channel. When you publish a message to a topic, it fans out the message to all subscribed endpoints.

Next step

[Start with an overview](#)

Step 3 :- Create type Standard by giving Name

Amazon SNS now supports High Throughput FIFO topics. [Learn more](#)

Create topic

Details

Type | [Info](#)
Topic type cannot be modified after topic is created

☐ FIFO (first-in, first-out)

- Strictly-preserved message ordering
- Exactly-once message delivery
- Subscription protocols: SQS

☒ Standard

- Best-effort message ordering
- At-least once message delivery
- Subscription protocols: SQS, Lambda, Data Firehose, HTTP, SMS, email, mobile application endpoints

Name

Maximum 256 characters. Can include alphanumeric characters, hyphens (-) and underscores (_).

Display name - optional | [Info](#)

Step 4 :- Click on create topic

Logging - optional [Info](#)

Choose the logging of message delivery status to CloudWatch Logs.

Label that you can assign to an Amazon SNS topic. Each tag consists of a key and an optional value. You can use tags to search and filter your topics and track your costs.

Tracing - optional [Info](#)

Enable tracing for this topic to view its traces and service map in Amazon CloudWatch. Additional costs apply.

Step 5 :- Create subscription topic ARN, protocol and Endpoint

Create subscription

Details

Topic ARN

Protocol
The type of endpoint to subscribe

Endpoint
An email address that can receive notifications from Amazon SNS.

After your subscription is created, you must confirm it. [Info](#)

Step 6 :- Then go to email and confirm the mail.

 **MyTopic <no-reply@sns.amazonaws.com>**
to me ▾

Why is this message in spam? It is similar to messages that were identified as spam in the past.

Report as not spam

You have chosen to subscribe to the topic:
arn:aws:sns:us-east-2:717279705533:MyTopic

To confirm this subscription, click or visit the link below (If this was in error no action is necessary):

[Confirm subscription](#)

Please do not reply directly to this email. If you wish to remove yourself from receiving all future SNS subscription confirmation requests please

Step 7 :- Subscription confirmed!

Simple Notification Service

Subscription confirmed!

You have successfully subscribed.

Your subscription's id is:

arn:aws:sns:us-east-2:717279705533:MyTopic:0c53d82a-84a4-4d23-adf2-7a40c33eda22

If it was not your intention to subscribe, [click here to unsubscribe](#).

Step 8 :- Verify the Status Confirmed

< **Subscriptions** | Access policy | Data protection policy | Delivery policy (HTTP/S) | Delivery status logging | >

Subscriptions (1)

Edit | Delete | Request confirmation | Confirm subscription | Create subscription

< 1 >

	ID	Endpoint	Status	Protocol
☐	0c53d82a-84a4-4d23-adf2-...	satputepratiksha88@gmail....	Confirmed	EMAIL

Step 9 :- Click on MyTopic and then click Publish message.

New Feature
Amazon SNS now supports High Throughput FIFO topics. [Learn more](#)

Topics (1)

Search

< 1 > ⚙

Name	Type	ARN
MyTopic	Standard	arn:aws:sns:us-east-2:717279705533:MyTo...

Step 10:- Write the Subject which you want in your mail.

Publish message to topic

Message details

Topic ARN
arn:aws:sns:us-east-2:717279705533:MyTopic

Subject - optional

Maximum 100 printable ASCII characters

Time to Live (TTL) - optional [Info](#)
This setting applies only to mobile application endpoints. The number of seconds that the push notification service has to deliver the message to the endpoint.

Step 11 :- Click on Identical Payload for all delivery and write the message that you want!

Message structure

☒ **Identical payload for all delivery protocols.**
The same payload is sent to endpoints subscribed to the topic, regardless of their delivery protocol.

☐ **Custom payload for each delivery protocol.**
Different payloads are sent to endpoints subscribed to the topic, based on their delivery protocol.

Message body to send to the endpoint

```
1 Hi,  
2 I Pratiksha Welcome you all to learn this service  
3  
4  
5 Regards Satpute
```

Step 12 :- Published the message!

Step 13 :- Validate the email on your email ID
